## **INFORMED CONSTENT TO CHIROPRACTIC TREATMENT**

The Nature of Chiropractic Treatment: The doctor will perform a physical examination. X-rays may be taken to evaluate your condition. The doctor will use his/her hands or a mechanical device in order to move our joints. You may feel a "click" or "pop" similar to the noise produced when a knuckle is "cracked," and you may feel movement of the joint. Various ancillary procedures, such as hot or cold packs, electric muscle stimulation, therapeutic ultrasound, or traction maybe also be used. Exercises may be recommended.

Benefits of Chiropractic Treatment: Many or most patients will feel improvement in motion, decreased muscle and joint pain and improved well-being after a series of chiropractic adjustments.

Possible Risk: As with any health care procedure, complications are possible following chiropractic treatment. Complications could conceivably include fracture of bone, muscular strain, ligamentous sprain, dislocations of joints, or injury to intervertebral discs, nerves, or spinal cord. A minority of patients may notice stiffness or soreness after the first few days of treatment. The ancillary procedures could produce skin irritation, urns, or other minor complications. X-rays produce ionizing radiation. There are reported cases of stroke associated with visits to medical doctors and/or chiropractors. The best quality scientific evidence does not establish a cause and effect relationship between chiropractic treatment and the occurrence of stroke; rather, indicate that patients may be consulting medical doctors and/or chiropractors for symptoms of headache and neck pan when they are in the early stages of a stroke. The possibility of such injuries occurring in association with chiropractic treatment is extremely remote.

**Probability of Risk Occurring:** The risk of complications due to chiropractic treatment have been described as "rare" to "extremely rare".

Other treatment options\_which could be considered are the following:

- Over-the-counter analgesics. The risk of these medications include irritation to stomach, liver, and kidneys, increased cardiovascular risk, and other side effects in a significant number of cases.
- *Medical care,* typically anti-inflammatory drugs, tranquilizers, and analgesics. Risks of these prescription drugs include all side effect as above, plus patient dependence in a significant number of cases.
- Hospitalization in conjunction with medical care adds risk of exposure to medical error, infection and other complications in significant number of cases.
- Surgery in conjunction with medical care, adds the risks of adverse reaction to anesthesia, as well as an extended convalescent period in a significant number of cases.

**Risk of Remaining Untreated:** Delay of treatment allows formation of adhesions, scar tissue, and other degenerative changes. These changes can further reduce skeletal mobility and induce chronic pain cycles. It is quite probable that the delay of treatment will complicate the condition and make future rehabilitation more difficult,

I have had the above unusual risks of my case explained to me.

I have read the explanation above of chiropractic treatment. I have had the opportunity to have any questions answered to my satisfaction. I have fully evaluated the risks and the benefits of undergoing treatment. I have freely decided to undergo the recommended treatment, and hereby give my full consent to treatment. This informed consent will remain in effect unless there are significant changes in my diagnosis or my legal status. I have the right to withdraw my consent at any time, upon written notice. I have the right to refuse treatment at any time.
